

## MEILLER TIPPER TRUCKS – PRESS RELEASE

**MEILLER** GmbH is a Munich based company which has enjoyed an exceptional reputation for over 160 years bringing in innovative products and solutions for the construction and waste management sectors. **MEILLER** has now partnered with **K H F Automotive** in **Dubai** to offer tippers and skip handlers to customers in the Middle East market.

The product range apart from Rear Tipper includes Tipping Semi Trailer, Rock Tipper, Asphalt Tipper, Container Transport Trailers and Skip Handler.

In earthworks and construction fields the **MEILLER** rear tipper, which is exhibited here at the Big 5, is always the first choice. The distinctive box body robustly fitted with 8mm floor and 6mm sidewalls with jet reinforcement ribs fits almost 18cbm of bulk material when level, on a triple axle chassis. The unique features includes scissor tipping stabilizer giving additional stability while tipping, reduced loading height which also lowers the vehicle's point of gravity, low tare weight, maximum payload and useful volume, high tipping & lowering speeds and mechanical tailgate locks with fewer wearing components. The tipper body is constructed using fine grain high grade steel thus making our product the most adaptive to Middle East conditions. At the heart of the classic **MEILLER** tipper is the well-known and proven **MEILLER** high pressure hydraulic system with its trust in axial piston pump having high rate of flow giving maintenance free operation and maximum efficiency. The cylinders of the hydraulic ram are nitrided and have an almost unlimited working life. Our unique proposition is that we guarantee quality and reliability as a system integrator – steel construction, hydraulics and control engineering from a single source – **MEILLER**. Our quality bears a single name – **Made by MEILLER** – as evident by repeatedly being awarded 12 times in a row in Germany, "Best Brand" in the category of "tipper". The optional add on's available are lateral fender plate to protect chassis attachment against falling bulk material, folding under ride guard / bumper bar, quarter shell / half shell or continuous mud guards, tarpaulin systems - roll up tarpaulin (manual or electric), access ladder & spare wheel carrier with winch, tail gate variants – inboard / outboard with either top hinged / hydraulic opening, divided tailgate, tool box, lights with LED technology and even radio control unit to operate the tipper from a remote and safe location.

Our tippers are distinguished by optimized exterior dimensions which maximize transportation volume. Moreover, the modular system concept facilitates easier assembly and quicker supply to our customers. Plus our commitment is not only evident in our first class products but also in our after sales service

which demonstrates its competence throughout the industry. Be rest assured that the technicians at our partner **K H F Automotive** in **Dubai** are eagle eyed when it comes to ensuring the functionality of the tipper.

It will be our pleasure to welcome you to our **stand OS C 25 at the Big 5 / PMV Live in Dubai** and be a part of the live demonstration and experience the superior and world renowned quality tipper's from **MEILLER**, Germany.
